

Intro to File Input & output

"Writing data
to" the file

Output file • describes a file that data is written to
• program stores output in the file.

"Reading data
from" the file

Input file • describes a file data is read from
• program gets input from the file.

YTB #65 Python tutorial for beginners.

raw data: collection of unprocessed data: no altered/
manipulated.

```
>>> open('myData', 'r')  
print(f.read())
```

r = read

w = write

a = append

```
close()  
read()  
readline()  
write()
```

```
>>> test_file = open(r'C:\Users\Blake\temp\test.txt', 'w')
```

Cyber Sec - Dion Sec 701

```
Variable = open('filename',  
                (r,  
                w,  
                a))
```

```
variable.write('---')  
variable.close()
```
